SAUGAT GIRI

Full Stack Developer | React · Node.js · TypeScript · AI-Assisted Development

Lalor, VIC • saugatgiri15@gmail.com • 0452 654 702 • portfolio-saugat.vercel.app • github.com/saugat-15 • linkedin.com/in/saugat-giri

PROFESSIONAL SUMMARY

Hands-on full stack developer with 2.5 years of commercial experience building and shipping end-to-end web applications across React, Next.js, Node.js, TypeScript, and cloud platforms (AWS, Azure). Experienced working directly with founders, designers, and lean product teams to test, iterate, and ship MVPs quickly. Uses AI development tools — Cursor and Claude Code — daily to accelerate delivery and stay focused on high-value engineering decisions. Exposure to React Native, PWA development, and Python. 6 cloud certifications across AWS and Azure.

CERTIFICATIONS

- AWS Certified Developer – Associate
- AWS Certified AI Practitioner
- Microsoft Certified: Azure Developer Associate (AZ-204)
- Microsoft Certified: Azure AI Fundamentals (AI-900)
- Microsoft Certified: Azure Data Fundamentals (DP-900)
- Microsoft Certified: Azure Fundamentals (AZ-900)

EMPLOYMENT HISTORY

Full Stack Engineer | The Data Foundry | Malvern, VIC *Mar 2025 – Present*

- Architected and delivered full-stack SaaS features end-to-end — building React and Next.js frontends consumed by stakeholders to interact with real-time data pipelines, focusing on performance, responsiveness, and clear UX across devices
- Integrated AI-powered conversational features using AWS Bedrock (Claude Sonnet), enabling non-technical users to query platform data through a natural language interface — improving product accessibility and reducing support overhead
- Worked directly with stakeholders to translate business requirements into intuitive, user-facing solutions — contributing technical perspective during design and scoping phases to ship faster with fewer iterations
- Built and maintained component libraries and reusable UI patterns in React and TypeScript, ensuring consistency and reducing duplication across the product
- Embedded testing into the development workflow using Jest and Playwright (unit, integration, E2E) — treating tests as part of delivery, not an afterthought
- Architected event-driven data workflows using AWS EventBridge, SNS/SQS, and DynamoDB Streams with DLQ retry strategies, improving fault tolerance across distributed services

Full Stack Engineer | Stormrake | Melbourne, VIC *Feb 2024 – Mar 2025*

- Built a client-facing portal in React and TypeScript with real-time balance and transaction visibility, JWT/OAuth auth, and high-frequency blockchain event streaming — handling live data updates without degrading UI performance
- Designed and shipped responsive, production-grade interfaces consumed by external clients — collaborating with design to achieve pixel-accurate, accessible layouts ready to support early-stage growth
- Built real-time on-chain analysis tooling using Node.js, Web3.js, and Alchemy/Infura APIs to detect and flag suspicious transaction patterns, directly strengthening fraud prevention
- Wrote Jest unit tests and Playwright E2E tests across the client portal, maintaining confidence in high-frequency real-time flows

Software Engineering Intern | Huddled *Dec 2022 – Mar 2023*

- Contributed to a collaborative university student platform — React, Node.js, AWS Lambda, DynamoDB, S3

Software Engineering Intern | 50 Raw *Aug 2022 – Nov 2022*

- Built student progress tracking and parent dashboard for a K-12 learning platform — React, Node.js, AWS infrastructure

PROJECTS

BetEngineApi — Production-Grade Betting Engine API | github.com/saugat-15/BetEngineApi

- Built a production-style REST API using ASP.NET Core (.NET 10), Clean Architecture, and CQRS with MediatR — ensuring clear separation of concerns and highly maintainable domain logic
- Implemented event-driven bet placement workflows via Azure Service Bus with dead-letter queue (DLQ) handling, FluentValidation pipeline behaviours, and AutoMapper for clean DTO mapping
- Secured endpoints with ASP.NET Core Identity and JWT authentication; provisioned Azure App Service and Azure SQL Database; configured GitHub Actions CI/CD for automated deployment on push

CCL Saathi | github.com/saugat-15/ccl-saathi

- Full-stack SaaS product built from the ground up for NAATI CCL exam preparation — Next.js, React Query, AppSync (GraphQL), AWS Amplify, Cognito, DynamoDB, Stripe
- S3 events trigger Lambda to invoke OpenAI Whisper API for audio transcription and automated scoring; real-time status updates pushed to the UI via AppSync subscriptions

MatchPulse | match-pulse-delta.vercel.app | github.com/saugat-15/MatchPulse

- Production-style real-time sports dashboard simulating high-frequency live data UX used in professional sports platforms — Next.js, TypeScript, React Query, Server-Sent Events
- Implements reconnect-aware SSE stream handling with exponential backoff and jitter, and a hybrid server-cached snapshot + live update strategy for resilience under continuous data load

SKILLS

Languages	TypeScript, JavaScript, Python (exposure), C# (.NET 8)
Frontend	React, Next.js, React Query, Tailwind CSS, HTML5, CSS3
Mobile & PWA	React Native (exposure), PWA principles, responsive-first development
Backend	Node.js, REST APIs, GraphQL (AppSync), ASP.NET Core
Cloud & DevOps	AWS (Amplify, Lambda, API Gateway, EventBridge, SNS/SQS, Bedrock, CodePipeline, CloudWatch), Azure (Functions, Service Bus, DevOps, Monitor), Terraform, Docker
AI & Tools	Cursor, Claude Code, AWS Bedrock (Claude Sonnet), OpenAI API (Whisper, GPT-4), RAG pipelines
Databases	DynamoDB, PostgreSQL, CosmosDB, SQLite, Entity Framework Core
Testing	Jest, React Testing Library, Playwright (E2E)
Architecture	Event-driven systems, component-driven design, SaaS multi-tenancy, MVP delivery

EDUCATION

Bachelor of Information Technology | Federation University, Melbourne *Nov 2018 – Oct 2021*
